Education and Certifications

- **M.S. Computer Science**, Stevens Institute of Technology, Hoboken, NJ, USA, **GPA: 3.8** **Aug 2021 - Dec 2022**
- **B.E. Information Technology**, University of Pune, Pune, India, GPA: 3.7 **Aug 2014 - Jun 2018**
- **Microsoft Certified: Azure Fundamentals (AZ-900)** **Jan 2021**

Technologies and Languages

- **Language and Tools:** JavaScript, TypeScript, Python (Libraries: Flask, Django, NLTK, Tkinter, NumPy, Pandas, Selenium, Scrapy, BeautifulSoup, Matplotlib), Java, PL/SQL, Git, Postman, Jira, Talend ETL, Tableau, Microsoft Excel, Jupyter Notebook
- **Web Technologies:** React.js, Redux, Jest, React Testing Library, Next.js, Node.js, Express.js, GraphQL, D3.js, Three.js, React Flow, Bootstrap, HTML, CSS
- **Mobile Application Development:** React Native (iOS and Android)
- **Database:** SQL (Oracle 11g, MySQL, PostgreSQL), MongoDB, Firebase
- **Cloud Technologies:** AWS, Azure, GCP

Work Experience

Full Stack Developer	BDIPlus, New York City, USA	July 2022 - current
• Engineered an AI-driven chat interface using React and Redux, integrating Redis-based SSE to enable real-time, context-aware responses; improved user interaction latency by 40% and boosted system throughput by 20%. • Diagnosed and eliminated critical performance bottlenecks using Chrome DevTools and Lighthouse, improving Time to Interactive (TTI) by 40% across browsers and devices. • Developed comprehensive test suites with Jest and React Testing Library, achieving 90% code coverage and reducing production incidents by 35%. • Led stakeholder-facing demos and presented technical trade-offs, driving clarity in delivery scope and improving feature alignment during bi-weekly sprint reviews. • Leveraged React Flow to create an interactive, real-time workflow dashboard, boosting team productivity by 30% through improved task visualization and management • Spearheaded the development process for a mobile application using React Native for both iOS and Android platforms, coordinating efforts with a team of 5 developers, conducting code reviews, leading weekly sprint meetings • Took ownership of the entire application development lifecycle from conceptualization to deployment, ensuring timely delivery and adherence to quality standards • Identified and resolved performance issues across various Android devices, including memory management and OS compatibility, enhancing the app's stability and user experience • Created a comprehensive marketplace feature in the web UI for client platform, successfully deployed it to production, and ensured a seamless user experience • Refactored and standardized the legacy product codebase, reducing compile time by 50% and eliminating unnecessary dependencies, resulting in more efficient and maintainable codebase • Authored detailed documentation and standardized procedures for the legacy product's UX design, enhancing maintainability and enabling better knowledge transfer within the team • Developed and published complete mobile app for Android and iOS within three months, overcoming organizational knowledge gaps in mobile app development and ensuring high-quality user experience • Implemented robust issue detection and resolution processes, ensuring optimal application reliability and integrity		
Application Development Analyst	Accenture, Pune, India	Oct 2018 - Jul 2021
• Validated and geocoded addresses for 1.2 M customer site addresses spanning across 195 countries • Improved business deliverables by aiding in securing bids worth 330k GBP • Enhanced DQ solution by overall 96%; Drastically increased throughput by 400%, significantly reducing the ETA		

- Drove efficiency through automation as Python Scripting Subject Matter Expert (SME)
- Innovated reporting system to provide location wise reports on all research parks of the world
- Awarded with Apex Award for Innovation and Thought Leadership and BT Spark Award for Standard Performer
- Experienced with PL/ SQL, Tableau, and python libraries: Flask, Tkinter, Pandas, Selenium, NumPy, Matplotlib
- Proposed recovery and mitigation plans for Escalation of Risks and Issues with Program Managers

Projects

TULSEE (Work Management and collaboration Platform)

[GitHub](#) | May 2022

- Engineered a dynamic B2C web application leveraging React, Redux, Next.js, Chakra UI, Node.js, Express, Firebase, and Socket.IO for seamless real-time collaboration and user management.
- Implemented features such as creating personal and group projects and CRUD operations for every task
- Integrated Zoom API, allowing group members to host meetings
- Added group chat, end-to-end encryption, image and document upload, search, and archive project
- Enabled easy login/sign-in option with Google SSO

E Banking Web Application

[GitHub](#) | Dec 2021

- Implemented web application allows users to make transactions with other registered users
- Programmed functions using Node.js, MongoDB, Handlebars.js, HTML and CSS
- Assisted users in making smart and conscientious decisions with their money by providing user-friendly and comprehensive analysis of their spending habits

NFC based Unique Identification and Data Management (YouID)

[GitHub](#) | Feb 2018

- Facilitated storage of information on cloud and its access through bio-compatible NFC tag implant
- Developed an Android application using Android Studio, Java and Cloud service
